

Warranty information and helpful cleaning tips for tile:

- Dannburg Flooring offers a one year installation warranty from date of install. Any manufacturing defects will be handled through 'Dannburg' in conjunction with the Manufacturer.
- Sweep a tile floor regularly. Dirt can adhere to the surface of tile, particularly styles with a textured surface.
- Feel free to use a vacuum cleaner to sweep, but be sure to use without a beater bar to avoid dulling and scratching the tiles. Vacuum attachments are useful to collect dirt along edges or in-between tiles.
- Use mats at entryways to minimize and contain dirt being tracked in - shake them often.
- Damp-mop regularly using the manufacturer's recommended grout and tile cleaners.
- For heavier soil, you can spot clean the floor with a sponge or clean cloth using the recommended cleaners.
- Textured tiles may require mild scrubbing with a soft brush. After cleaning, rinse well and wipe dry for optimum shine.
- Avoid using steel wool, scouring powders, or other abrasives that can scratch the finish.
- Do not use bleach or ammonia based cleaners as these products can discolour your grout if used too often.
- Do not clean glazed tile with oil-based cleaners.
- Clean up spills as quickly as possible so that the grout or tile doesn't become stained.
- While ceramic tile is considered very durable, it is not indestructible and may crack or chip under extreme force.
- Cover furniture and table legs with protectors to guard your floor against damage.
- Once the tile has been laid and grouted, it is your responsibility to maintain areas exposed to water by caulking. Caulking will prevent expensive subsurface damage, as well as keep the tiled areas looking their best.
- After the grout has had ample time to cure, sealing the grout and tile can provide protection from dirt and spills by slowing down the staining process.
- Regular care and maintenance will keep your ceramic tile looking new for years to come.
